

FIG. 1

FIG. 2

FIG. 3

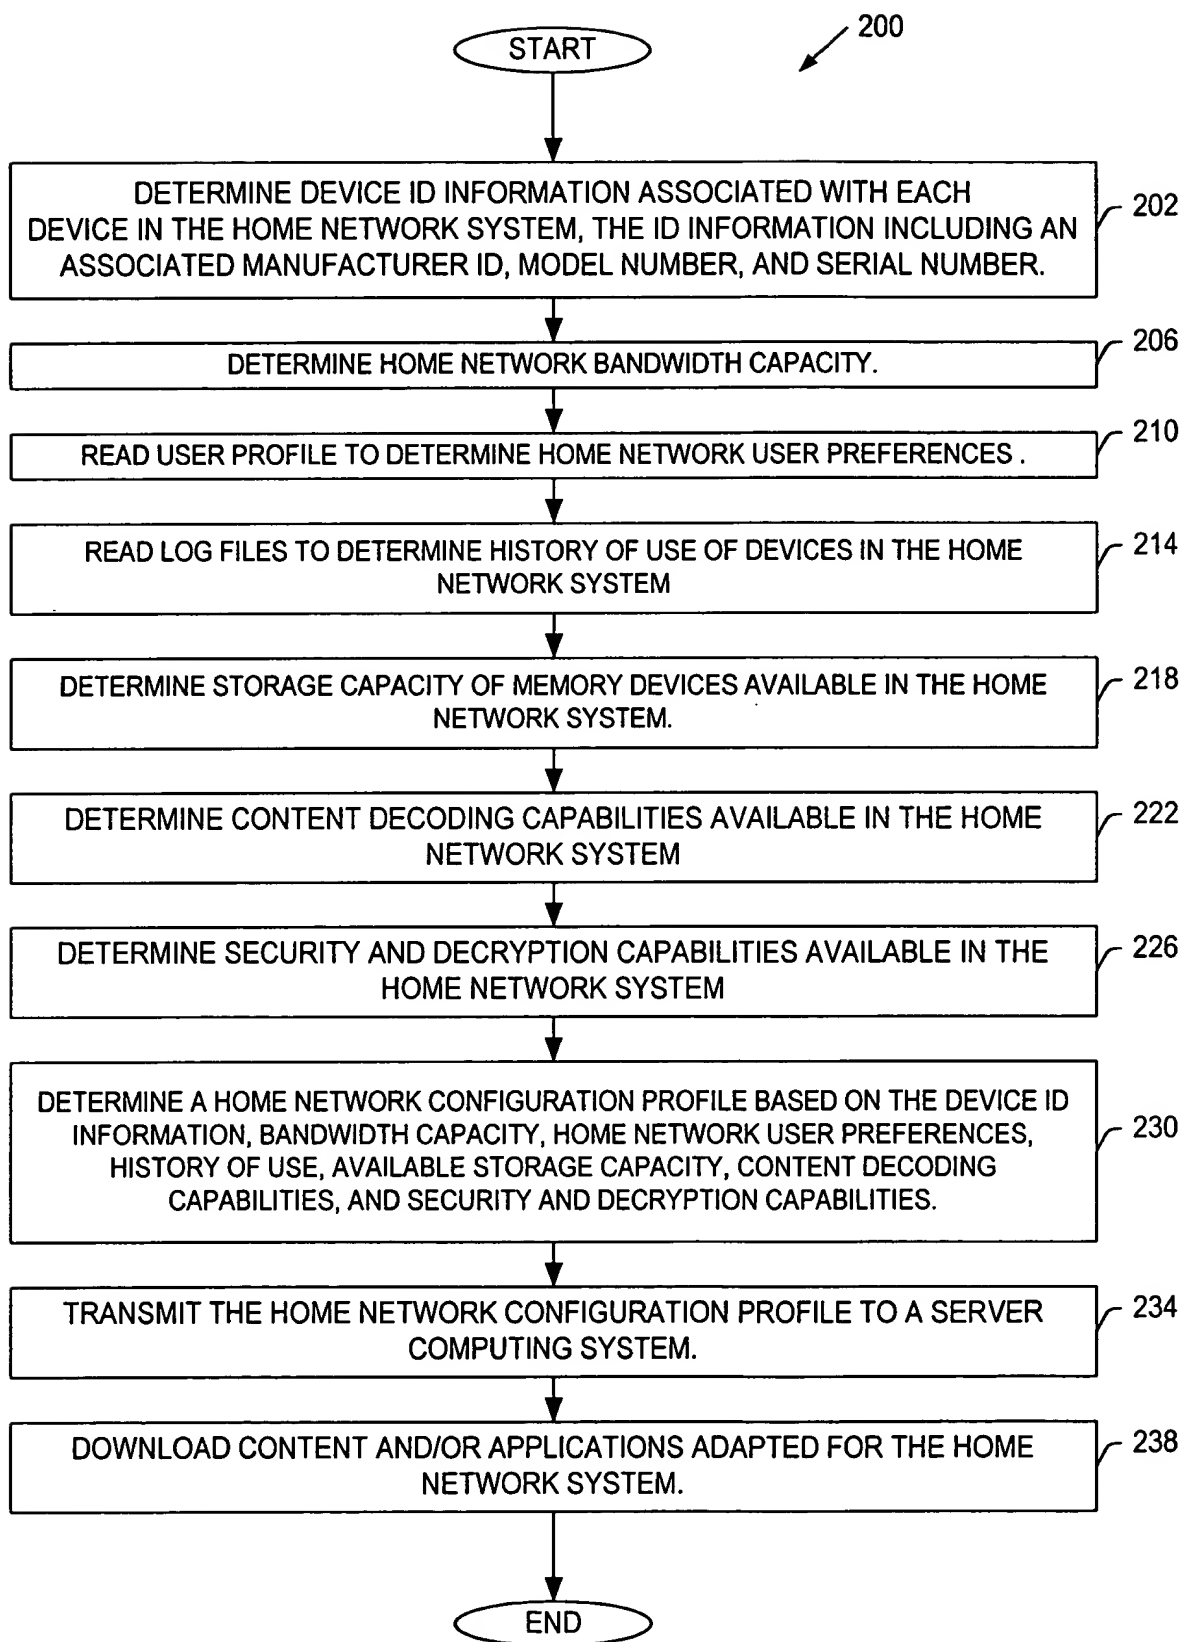

FIG. 4

The figure consists of 12 sub-diagrams labeled (a) through (l), arranged vertically. Each diagram shows a different stage in the construction of a 3D model of a human head and neck. The models are represented by various symbols, lines, and shaded areas to indicate different parts of the anatomy. Labels are placed around the models to identify specific features. The sequence starts with a simple outline in (a) and gradually adds more detail, including facial features, neck structure, and internal components, culminating in a complex, multi-layered model in (l).
